EDUCATION

University of California, Berkeley

Aug 2015 – Dec 2018

B.S. Electrical Engineering and Computer Science

COURSEWORK

- CS 162: Operating Systems
- CS 188: Artificial Intelligence
- CS 189: Machine Learning
- CS 176: Computational Biology
- CS 194-26: Computational Photography
- CS 170: Efficient Algorithms and Intractable Problems
- Music 158A: Sound and Music Computing
- CS 61C: Great Ideas in Computer Architecture
- EE 16A/B: Designing Information Devices and Systems
- Music 207: Graduate Project in Computer Music

SKILLS AND LANGUAGES

Languages	Python, TypeScript, Go, SQL, Java, C/C++, JavaScript, HTML, CSS, LaTeX
Libraries/Frameworks	PyTorch, TensorFlow, FastAPI, React, Next.js, Tailwind, Pandas, NumPy, SciKit, OpenCV
Tools	Kubernetes, Docker, Ray, AWS (SageMaker, EMR, Step Functions), GCP (Vertex AI), Snowflake, Postgres, Supabase, Vercel, OpenAI APIs

WORK EXPERIENCE

Independent | Founder

Oct 2024 – Present

Edith.media — Editorial marketplace where freelance writers pitch publishers on open calls.

- Built end-to-end on Next.js + Supabase Postgres: row-level security (RLS) enforces writer/editor isolation in the database, and editor decisions stream to writer dashboards in realtime.
- Live with 70+ writers across 3 partner publishers.

Kodo AI — AI compliance tooling for perfume/fragrance brands.

- Built an MVP using GPT APIs to cross-reference perfume formulas, labeling, and packaging against global regulatory standards (IFRA, EU Cosmetics Regulation).
- Ran 20+ discovery interviews including a regulatory lead at Estée Lauder to scope the compliance workflow.

BrainPOP | Artificial Intelligence Engineer

July 2023 – Dec 2023

- Designed a production cosine similarity system to classify educational content with respective state and national curriculum standards (e.g. Common Core, NGSS, etc.)
- Utilized Vertex AI LLMs (large language models) to generate test banks on educational video transcripts

Amazon | Software Development Engineer

July 2019 – June 2022

- Designed and built offline Spark machine learning data collection logic and pipeline in EMR that processed at peak 35% of all Amazon US search advertising data on a monthly basis
- Automated and orchestrated various ML data processing components using AWS Step Functions
- Developed offline Spark counterfactual analysis tool to quantitatively estimate the ad revenue cost of various reserve prices

Intel AI (Nervana Systems) | Artificial Intelligence Intern

June 2018 – December 2018

- Designed distributed RL training infrastructure on Kubernetes (Ray, RL Coach; PPO, DDPG, Ape-X) in collaboration with Amazon using their SageMaker RL platform

Adobe | Software Engineering Intern

May 2017 – August 2017

- Developed a crucial onboarding feature by implementing RESTful APIs and designing custom web components in PHP and AngularJS that allows Adobe Ad Cloud clients to optimize on various metrics

PROJECTS

HRTFVAE Estimation for Spatial Audio

Tensorflow, Keras, Python

- Developing method to use user audio calibration and convolutional neural networks to generate Head Related Transfer Functions (HRTFs) and simulate spatial audio in headphones

dermio (Skin Disease Classification)

Tensorflow.js, Python, CNN, Javascript, HTML, CSS

- Developed a web app using the Tensorflow Javascript library to classify various skin diseases using the device webcam based on a fine-tuned MobileNetV2 model which achieves 48.9% accuracy on 198 classes
